

RESULTS

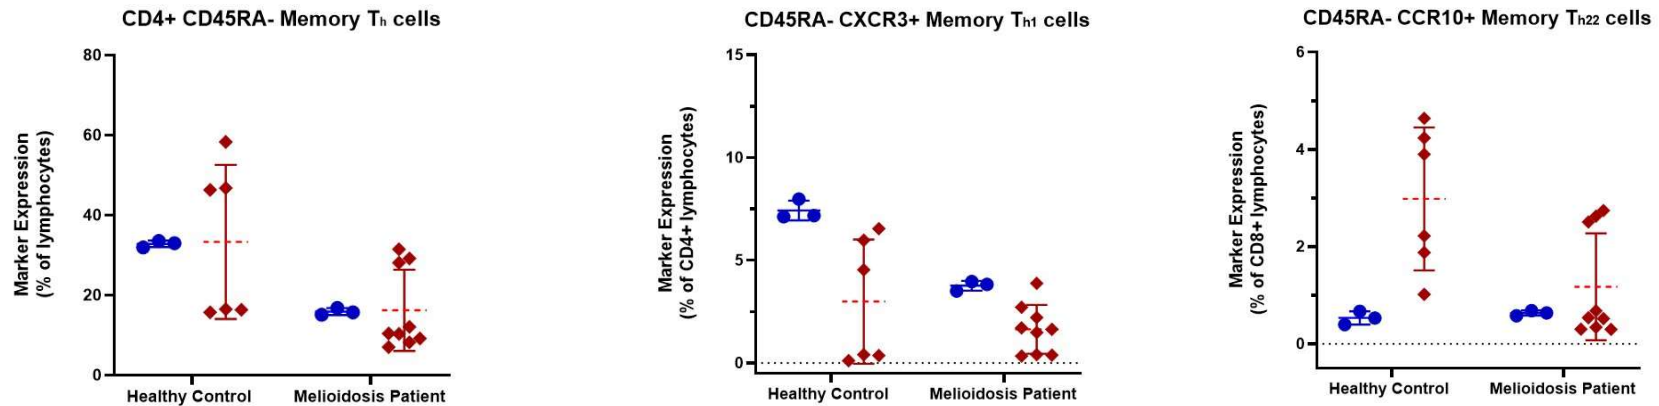

- CD4+ and CD8+ T Cells:** Higher in healthy controls, decline significantly in melioidosis patients, especially by the 6th month.
- CD20+ B Cells:** Gradual decrease in melioidosis patients over 6 months, higher in healthy controls.
- CD56+ NK Cells:** Slight decrease in melioidosis patients by the 6th month, similar across groups.
- Monocytes and Classical Monocytes:** Elevated in melioidosis patients, especially early on, decreases over time.

Results

Naïve CD4+ T cell subsets

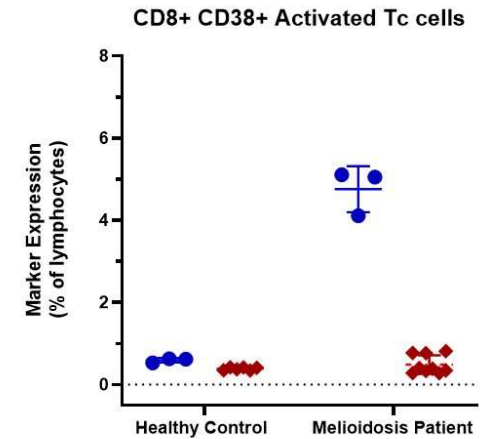

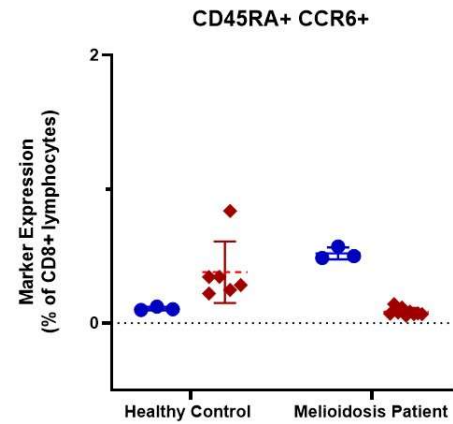

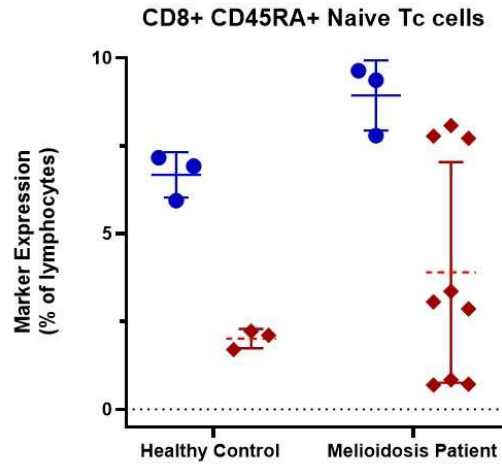

Memory CD4+ T cell subsets

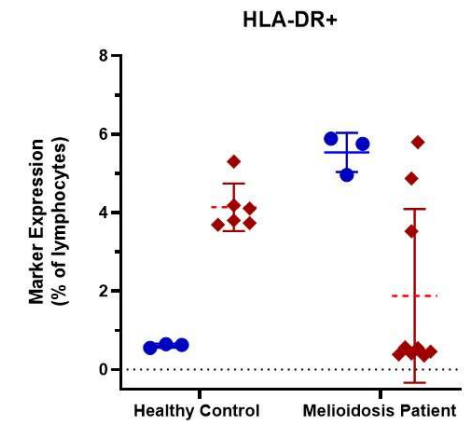

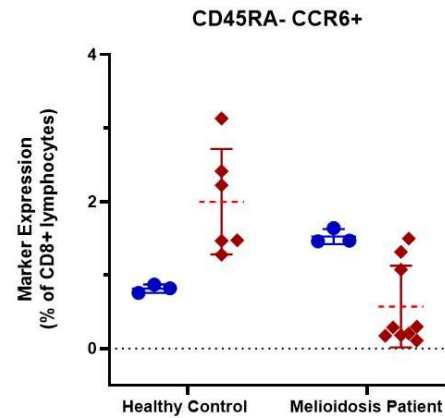

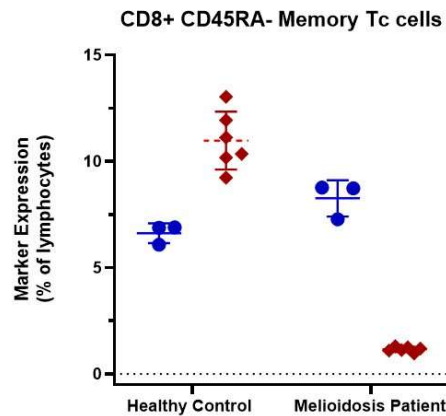

■ Early Adulthood (20-39 years) ■ Adulthood (>40 years)
